For a number of years the Products Co. thru its R&E function has published a Technology Forecast, the prime purpose of which is to provide a summary of developing technology having potential impact on our future operations. Included in this Forecast is a section on Environmental/Health Factors. My intent in making this section available to you is primarily for information purposes, however, since this is an ongoing process, I would appreciate any comments you would care to make re our forecasts so that we can consider them in our next forecast.
